Step 2: Run the Install Program	4
Step 3: After the Install	8

CHAPTER 1

Step 1: Download NPS User

Navigate your favorite browser to http://www.cgmlarson.com/products/download_nps.php and Click on the top link, “Network Print Server User Client Utility”, and save it to a convenient location.

Network Print Server Download

The Larson Network Print Server consists of two components: the service itself and a GUI-based job submission utility called NPS User. You can download these components separately using the links below:

Network Print Server Service (Required)

This will normally be installed on your network's existing print server, since it takes advantage of any existing Windows print queues. The service comes with an administration tool called the Larson NPS AdminTool. You will use this utility to configure the settings of the service and your individual plotters.

[Click here to download the Network Print Server service.](#)

Network Print Server User Client Utility (Not Required)

This utility should be installed on your users' machines, if they need the ability to submit custom plot jobs to the NPS service. Though this utility makes it easy to submit jobs that need special handling (scaling, gamma correction, rotation, etc.), your users can use this to submit most jobs.

CHAPTER 2

Step 2: Run the Install Program

Double click the icon of the file you just downloaded and you will see a screen displayed like the one below:

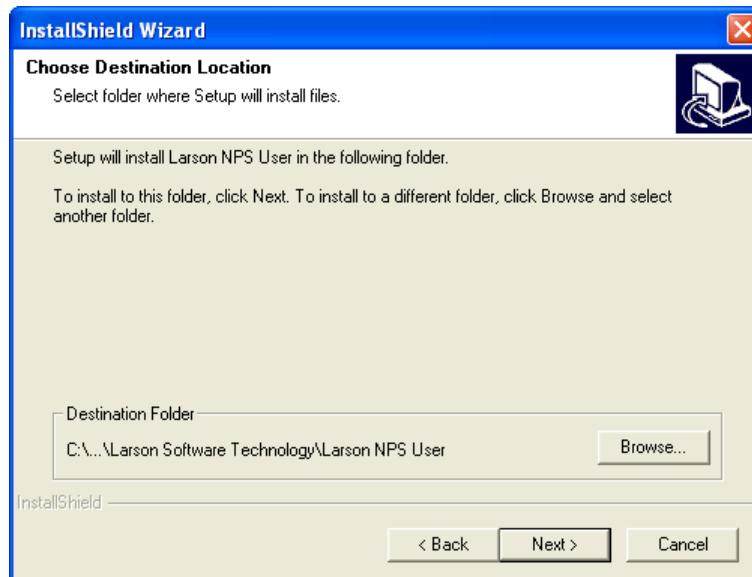

Click Continue

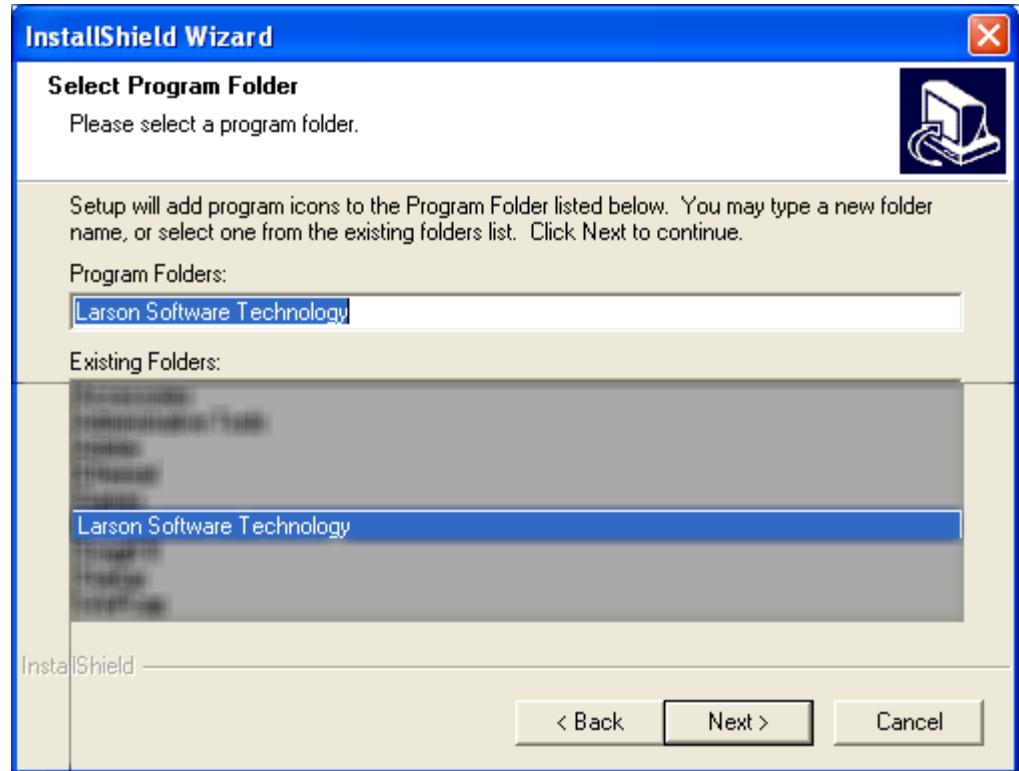

Click Next

Click Yes to Continue

Click Next

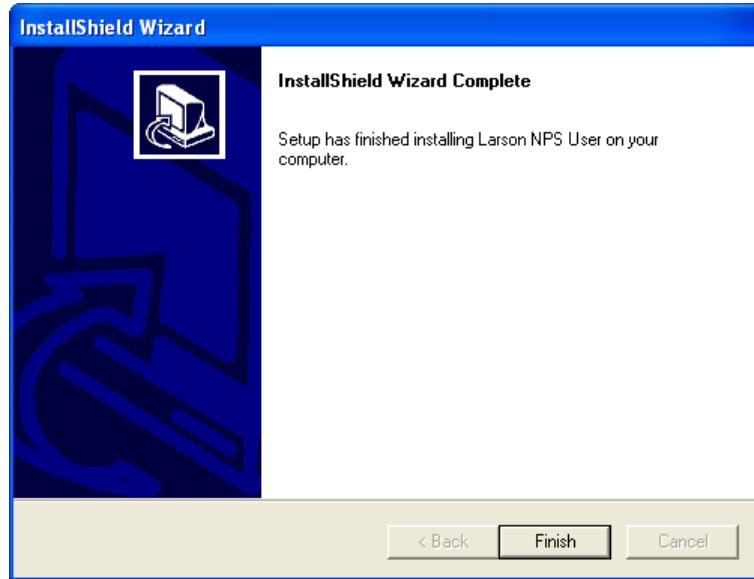

Click Next

You will need to type in the hostname of the computer running the Network Print Server Service.

Click Next

Click Finish

CHAPTER 3

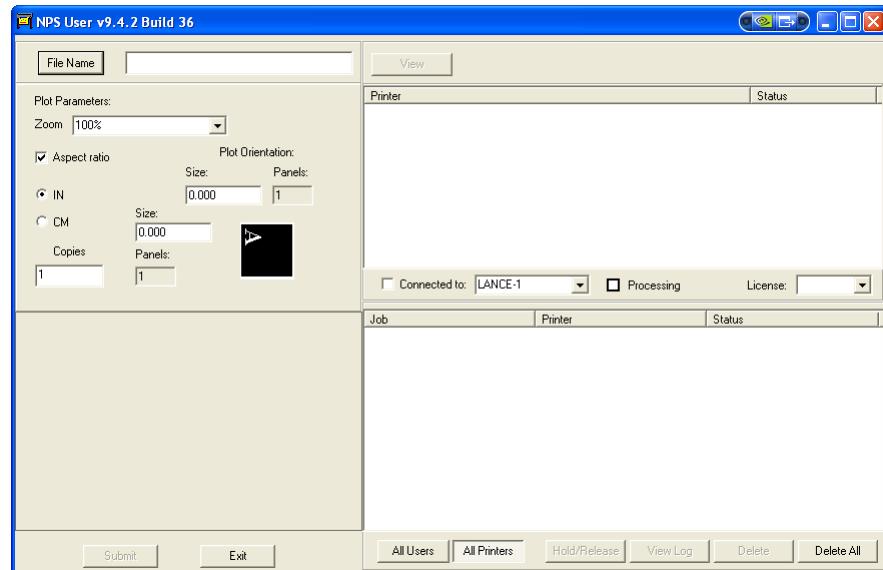

Step 3: After the Install

NPS User

You now have a new icon on your desktop!

Double click the icon and you will see a screen such as this:

Be sure that the “Connected to” box displays the name of the server running the Network Print Server application. Now Select a file by clicking on “File Name”, then select a printer on the right side. Choose your options and click “Submit”.
